THE AMERICAN TECHSTONE VAULT

■ Since the beginning of time man has always realized the need for complete and lasting burial protection for his loved ones. The desire to provide such protection has ever been one of mankind's finest traits. Various kinds and types of burial receptacles have been used in an effort to cope with the destroying elements of the earth. None of them, however, provided assurance of absolute protection from water and other underground destructive forces.

■ With the introduction of the American Burial Vault in 1911 people began to discover that positive, permanent burial protection was available. They were quick to realize that its absolute protection of those who pass on afforded peace of mind for those who remain.

■ The American Techstone Vault affords unfailing burial protection because it is made scientifically in a modern, temperature controlled plant by men who are craftsmen in the strictest sense of the word. TECHSTONE, the material of which it is made, is absolutely impervious to water and all other destructive underground elements. It will withstand tremendous pressure per square inch of cross sectional area without cracking or crumbling. It is actually and literally **Technically-made Stone**.

■ It cannot rust. It cannot corrode. It cannot disintegrate. For these reasons the American Techstone Vault has been adopted as an essential feature of modern funeral equipment, almost as necessary as the casket. Nearly a quarter century of never-failing service explains why leading funeral directors recognize the American Vault as the very finest burial protection available.

■ The following pages depict the vault sealed and unsealed. They show the type of reinforcement used, the positive method of sealing and the solid bronze name-plate which is furnished with every vault. They illustrate some of the reasons why the makers of this vault warrant every vault to afford complete and lasting protection without limit as to time. In material, in design, in workmanship the American Techstone Vault adds to absolute protection a degree of beauty and dignity in accord with today's taste and standards. Yet it adds but very little to the total funeral expense. Those who arrange for its use provide a tribute to the lasting, more practical than any memorial . . . a symbol of love and reverence that passing years cannot dim.

■ The American Techstone Vault is delivered to the cemetery installed in the grave and hermetically sealed by our own uniformed attendants. It is obtainable through Funeral Directors only.

AMERICAN
TECHSTONE VAULT

■ One of the most outstanding characteristics of the American Techstone Vault is its striking beauty and stateliness. The vault is enameled gray on the outside and white inside. The exterior of each vault has a complete stipple finish. The vault is further distinguished by a massive, panel cover of beautiful design on which is embedded a solid bronze name-plate properly engraved.

■ Sectional view of American Vault showing special, heavy steel reinforcement within walls and cover. Note the large groove in cover for waterproof, mineral sealing compound.

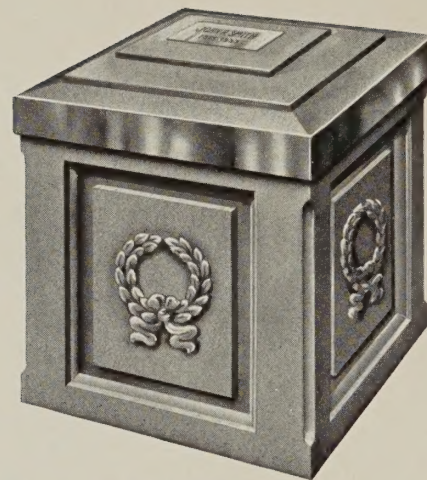

■ The American TECHSTONE Vault employs the hermetic seal—the most positive vault seal known to Science. This seal, which works on the tongue and groove lock-joint principle, is effected quickly and quietly without entering the grave. The cross section illustration shows how the special mineral sealing compound (indicated by black within circle) is compressed out over the inner wall, the outer wall and the top edge thus actually producing a triple seal from the underground elements. The strength and security of this seal is one of the principal reasons for the un failing performance of the American Vault.

■ With every American TECHSTONE Vault is furnished a solid bronze name-plate on which the name of the deceased is engraved. This plate is firmly embedded in the cover where it can readily be seen. It affords a permanent record of the interment.

AMERICAN TECHSTONE CREMATION URN

■ The American TECHSTONE Cremation Urn is made to hold the standard size Cremation Can. Reinforced throughout with steel—absolutely waterproof, finished white enamel inside and grey outside—design ornaments the four outer walls. Inside measurements: No. 1, L-8", W-8", D-10"; No. 2, L-12", W-12", D-15". An engraved copper name-plate is embedded in cover which has a solid copper cover band.

AMERICAN TECHSTONE VAULT

■ The American Techstone Vault is absolutely airtight and waterproof and is warranted to protect the casket and remains from the elements of the earth without limit as to time. Finished with gray enamel outside and white inside although other finishes may be had if desired. The cover and body of the vault are constructed each as a unit with no joints to spread or loosen. The American Techstone Vault occupies no more space than an ordinary box and it may be removed from the grave at any time. The following sizes are in stock at all times ready for immediate delivery:

AMERICAN TECHSTONE VAULT
